## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.  
PCT/SE 2003/001091

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	1-25	YES
	Claims		NO
Inventive step (IS)	Claims	1-25	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-25	YES
	Claims		NO

## 2. Citations and explanations (Rule 70.7)

The application relates to a method to locate a fault from one end of a section of a power line.

Documents cited in the International Search Report:

D1: US 4559491 A1  
 D2: EP 0358488 A2  
 D3: SU 761953 B  
 D4: US 4107778 A1

Document D1 describes a method and a device for locating a fault point within a given section of a three-phase power transmission line. The distance to the measuring point is calculated from the parameters in a quadratic equation. See the abstract and equation 43. The calculations use symmetrical components. See column 4, lines 25-32.

Document D2 describes equipment for and methods of locating the position of a fault on a power transmission line. Symmetrical component transformation might be used in the calculations. See page 4, lines 58-61. Measurements are done in two different ends.

Document D3 describes a two-circuit branched transmission line fault site location system. The formulae for the distance to the fault site from a substation are formed in terms of symmetrical components and self-reactances of the circuits. See the abstract.

Document D4 describes a fault-location calculating system

## Supplemental Box

In case the space in any of the preceding boxes is not sufficient.  
Continuation of: Box V

using a symmetric coordinate system and calculates the distance to the fault location.

The fault point locating method described in D1 is considered to represent the closest prior art. The claimed invention differs from this technique in that it determines a compensation for a shunt capacitance. The invention defined in claims 1-25 is not disclosed by any of these documents. Documents D1-D4 do not give any indication that would lead a person skilled in the art to the claimed method to locate a fault in a power line. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-25 is novel and is considered to involve an inventive step. The invention is industrially applicable.
